

INCREASING ORDERS – Good!

There has been much investments in marketing technology to increase orders. However, this comes with increased costs. One of the biggest contributors to increased hard costs is manual order entry errors and manual processing time.

- The average cost to rework an order is \$200-\$250
- Customer Service Representatives (CSRs) spend at least 20% of their time processing orders.

A.T. Kearney Research

INCREASING COSTS – Bad!

Many supply chain managers are seeking to automate this function and lower operational costs - but feel they may not have the tools to get started.

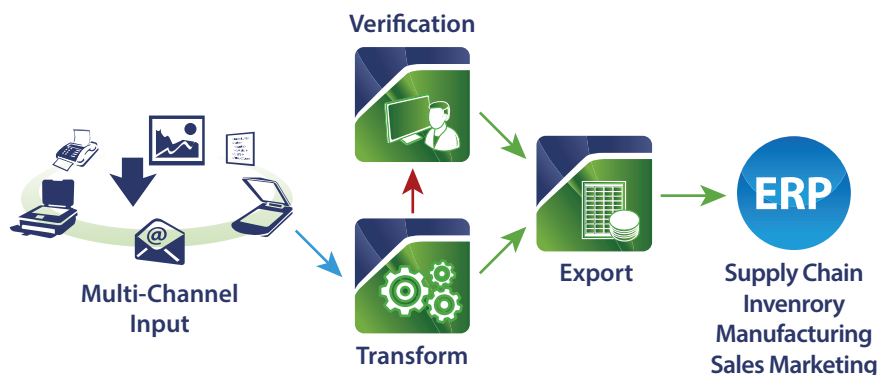

Take action! Automate order processing and managing costs with Artsyl's

OrderAction - Equip stakeholders across the business with out-of-box functionality for extracting actionable order data in a timely manner.

Higher data accuracy improves operations throughout the entire Supply Chain. OrderAction is built on years of experience and order management understanding, providing quicker implementations and overall lower operational costs.

Automated Order Processing

Order Receiving | OCR | Separate | Extract | Classify |
Verify Order Line Items | Validate Buyer & Supply Chain Status |
Notifications | Export to ERP and Supply Chain managers

Benefits of using OrderAction

- **Lower operational costs** by eliminating error prone manual processes with the ability to repurpose talent to more value-added tasks.
- **Faster Response Time** - improve your customer's experience and loyalty – in addition to your competitiveness and faster Order- to – Cash cycles.
- **Agile Supply Chain Management** Improving accuracy helps to avoid double shipments, restocking, imbalanced inventory levels or missed orders.
- **Improved Customer Insights** Quicker and increased visibility into customer purchasing habits, buying cycles and ever-changing market requirements
- **Continuous Improvement** – Each time an order is processed there is opportunity for OrderAction's machine learning to learn something new about your customer and their orders, resulting in even further efficiencies as time goes on.

What manually processing invoices is costing your business

62% of total accounts payable costs are labor.

A result of the need for manual intervention due to data errors in POs, shipping and receiving documents, and invoices.

American Productivity & Quality Center survey of 997 organizations

The average cost of processing an invoice is \$12.90.

That jumps to a staggering \$18 to \$25 per invoice or non-PO-based invoices.

Association for Intelligent Information Management (AIIM)

Take action to cut costs with Artsyl's InvoiceAction

InvoiceAction is built on years of invoice understanding experience with out-of-box automation that results in higher data accuracy and quicker implementations.

Robotic Transformation Processes

Input | OCR | Separate | Extract | Classify | Verify Document & Business Rules Validations | Routing Approvals | Notifications | Export

Benefits of using InvoiceAction

- Lower operational costs by eliminating error prone manual processes and applying machine-learning to repetitive user actions.
- Agility in Spend Management
Avoid double payments. Apply all credits. Leverage early payment terms.
- Improved Vendor Relations
Attract and retain vendors and suppliers who value partners that don't lose their invoices, pay on time, and ensure costly duplicate payments are never made.
- Customer satisfaction and a competitive edge by accelerating the speed at which information moves through your organization.
- Visibility into payment and processing status which can drive continuous improvements
